

# Interested in Learning More About Our Special Needs Vaccine Clinic?

Autism New Jersey is partnering with the Visiting Nurses Association of Central Jersey to provide comprehensive information, support, and vaccine access through our [special needs vaccine clinic](#).

Through our extensive planning conversations with families and medical staff, we found that approximately one quarter of the families report that their child has a specific fear or phobia of needles and nearly all noted the need for some type of individualized accommodation.

Our site takes these challenges into consideration and offers the solutions that include:

- Pre-vaccine appointment conversations
- Ongoing communication with nursing staff
- Individualized on-site accommodations
- In-car vaccine option
